Team Leader [3]	Will coordinate project duties, identify and act if problems arise throughout all stages. Will lead with the implementation of unit testing, QA testing and UI testing
Architect [3]	Will take responsibility for overall design and integration throughout all stages. Will lead with the implementation of the functionality of the system including I/O coordination, UI rendering, responsiveness and optimization.
Communicator [3]	Will ensure documentation meets requirements, record all meetings and action points. Will keep notes throughout all the stages. Will assist the architect in implementing the functionality of the system including I/O coordination, UI rendering and optimization.

Instructions:

1. Replace any text in the right-hand column with information about your project.
2. For each role identify the person and state if the role is fixed for the duration of the project or rotating and changing for every phase of the project. Give a brief summary of the duties (job description) in the right-hand column.
3. Being in charge of a portfolio does not mean that person has to undertake all the work associated with that job. Learn to delegate ...
4. If your project has specific other roles then add them to the duties of a person and add that description in the left-hand column.

Follow-up

1. Bring this document to your next meeting with your client (or email it to them beforehand) ensure that everyone understands and agrees on the responsibilities.
2. *If the roles change (or rotate) then ensure that this is recorded in the project progress reports.*
